

General Ecology

Ecology: how organisms interact with one another and with their environment

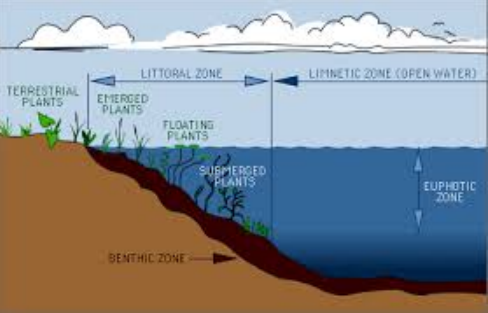

Environment: abiotic and biotic features

Levels of Organization: Population (same species) > Community (diff. species, biotic) > Ecosystem (community+abiotic) > Biosphere (portion of Earth w/living species)

Aquatic Ecosystems

Lentic Ecosystems (STILL Water)

Ponds Bottom of the pond still receives light, unlike lakes.

Horizontal Lake Zones Littoral Zone: Near the shoreline; Sunlight penetrates all the way to sediments; Allows for aquatic plants (macrophytes) to grow. Limnetic Zone open water, away from shore. Vertical Lake Zones
